

FOR IMMEDIATE RELEASE

New China-free UltraFINE™ L-Ascorbic Acid Vitamin C Powder

Lisle IL, Dec 7, 2012 Physicians prescribe UltraFINE™ vitamin C powder to achieve the highest blood levels of ascorbic acid. Most vitamin C on the market is made in China and is marketed in one of two forms, either L-ascorbic acid or sodium L-ascorbate. The ascorbic acid form is the most common form of the vitamin and it is the form that was used and recommended for oral consumption by Linus Pauling.

The new **UltraFINE™** Vitamin C is a unique L-ascorbic acid powder that dissolves almost instantly in water and has little taste. Doctors who have clinical experience with this ultrafine powder have requested it. The different (tiny) particle size makes all the difference. This highly refined grade of powder is better absorbed and thus more bioavailable than other vitamin C powders. Our preliminary measurements show that vitamin C blood levels peak at 24 times steady state levels within 15 minutes after ingestion of **UltraFINE™** ascorbic acid. (Note: Other absorbable forms of vitamin C, such as liposomal vitamin C and intravenous vitamin C, are administered as sodium ascorbates, not ascorbic acid. Our measurements show oral sodium ascorbate only raises blood vitamin C levels 8 times steady state in 25 minutes)

UltraFINE™ Vitamin C is not manufactured in China. Almost all vitamin C products on the market are made from inexpensive Chinese vitamin C. The new **UltraFINE™** is the finest powder (ultra-fine) of the highest-quality product on the market which has been branded and trademarked as [Quali-C***®](#) manufactured by DSM Nutritional products.

UltraFINE™ vitamin C powder is guaranteed as follows:

- **NOT MADE IN CHINA.** (UltraFINE™ Vitamin C powder is made entirely from [Quali®-C***](#), manufactured in Europe by DSM nutritional products.)
- **Finest grade of pure L-ascorbic acid (vitamin C) powder**
- **Dissolves instantly**
- **100% corn free**
- **Completely free of Genetically Modified Organisms (GMOs).**
- **Hypoallergenic**

Vitamin C expert Robert Cathcart III, MD, had the most clinical experience administering high-dose vitamin C to his patients. Dr. Cathcart considered the ascorbic acid form of vitamin C to be twice as potent orally as the sodium ascorbate forms for many therapeutic applications.

Vitamin C expert and author Thomas E. Levy, MD, JD writes about vitamin C and cancer in his seminal book *Primal Panacea* (2011),

Description: *Cancer is a class of diseases to which a group of cells displays uncontrolled growth invading and sometimes destroying adjacent tissues. In its advanced stages it frequently metastasizes or spreads to other locations in the body via lymph or blood. These three malignant properties of cancers*

differentiate them from benign tumors, which do not rapidly proliferate, invade or metastasize.

Traditional Approach: *Often a combination of one or more of the following is used: surgery, radiation, and chemotherapy. The theory behind radiation and chemotherapy is that the more rapidly growing cancer cells are less able to defend themselves from toxic assault than the normal cells. Radiation and nearly all chemotherapy drugs are themselves carcinogenic (cancer-causing), since they increase oxidative stress in all the cells treated, not just cancer cells.*

Studies Show: *(References in the book **Primal Panacea**)*

- *Case studies demonstrate success in treating and even completely resolving various cancers with high-dose vitamin C.*
- *In advanced cancer patients, high-dose vitamin C therapy compared to conventional therapy at one facility over a 3-year period shows:*
 - *75% better breast cancer survivor rate*
 - *867% better lung cancer survivor rate*
 - *107% better colorectal cancer survivor rate*
 - *When breast cancer patients made this facility as their first treatment option, the 3-year survival rate improved by 134%*
- *High-dose vitamin C enhances the effectiveness of traditional chemotherapies*
- *Vitamin C has its own cancer cell-killing ability, and it also significantly improves the cell-killing ability of doxorubicin – even when the vitamin C is given at a non-cytotoxic dosage, it still improves the cell-killing ability of doxorubicin*

Authors and vitamin C experts Steven Hickey, PhD, and Hilary Roberts, PhD, write in their book **Cancer Breakthrough, Handbook on Vitamin C Therapy for Patients and Doctors**

"There was something odd about the results of the vitamin C and cancer experiments Linus Pauling reported in the 1980s: patients lived longer - much longer. Those treated with vitamin C lived an average of four times as long as control patients who did not receive vitamin C. This massive improvement was unparalleled in the history of medicine."

CONTACT

UltraFINE™ vitamin C is currently available for retail purchase by searching for "China free vitamin C powder" at amazon.com

Physicians, clinics and retail outlets interested in wholesale pricing should contact Marianne Fonorow 630-416-1438, fonorow.assoc @ gmail.com
